

# Dry Floor Screed Panels

## Knauf Brio Dry Screed Panel

Knauf Brio is a high quality, interlocking dry floor screed system using gypsum fibreboard technology. Installed and ready for traffic in a fraction of the time of traditional wet screeds, Knauf Brio is light whilst still providing a tough impact resistant surface. Thermally transparent, Knauf Brio is ideal for underfloor heating systems, and wood-fibre backed Knauf Brio WF provides excellent impact sound reduction.

Knauf Brio is a dry screed gypsum fibreboard with four precision-engineered lapped edges to ensure boards butt to each other perfectly. Knauf Brio Panels are ideal for use over underfloor heating systems where their high thermal conductivity allows a quick transfer of heat into the room.

Compliance: EN15283-2.
