With PFT always one step ahead

PFT SILOJET XXL convinced in every respect

The universal assistant PFT SILOJET XXL for long conveying distances is facing particular challenges in a demonstration in Painten, Lower Bavaria. By the use of the PFT unit in this test, the fine quartz sand could be blown over a long distance directly in the production silo. In the past, the material had to be decanted with much effort from the storage silo to a silo truck by container and forklift and had to be transported from there to the production silo – an additional logistical burden which can be omitted due to the innovation from PFT.

In spite of the rough-running material quartz sand, the innovative technology via „bypass“ could successfully fulfill the high technical requirements.
