### **PFT SILOJET – free fall unit for greater conveying distances**

Conveying distances of up to 200 m – no problem for the pneumatic conveying unit PFT SILOJET long conveying distances.

The conveying pot can be filled during the delivery process what causes an enormous time advantage and increases at the same time the conveying power. A variety of units has already proved its worth in building construction. PFT technicians were able to put the machine successfully into operation in Singapore.

The advantages speak for themselves: thanks to the sophisticated technology of the conveying unit which regulates and controls itself fully automatically, up to three times more material can be pumped. The great time advantage regarding high conveying distances means that money can be saved.
