

Being fully satisfied with the first PFT EM 11 M electric mixing pump - and having noticed an increase in the number of orders - the plastering firm Milosek did not hesitate to buy a second and a third machine of this type.

High Customer Satisfaction Thanks to **HIGH PERFORMANCE** of PFT EM 11 M

About one and a half years ago, Roland Milosek, the owner of Putztechnik Milosek, a plastering firm based in Schloss Holte-Stukenbrock (North Germany), decided to buy his first PFT EM 11 M electric mixing pump. Before, he thoroughly tested the newly launched PFT machine. In a few demonstrations and field tests, the electric mixing pump had to prove its worth. However, the high performance of the machine and, ultimately, a visit to the PFT machine factory in Iphofen fully satisfied Mr. Milosek. Thanks to the optimal interplay between Mr. Milosek's workers and their PFT machine, all building jobs that followed were completed properly and, above all, on schedule.

Applying 12,000 m² of plaster in six weeks - this can only be accomplished with optimal equipment! The job was done on a piecework basis, and two PFT EM 11 M electric mixing pumps helped to mix and pump the material.

Large-Scale Order Requires Additional Machines

When Mr. Milosek accepted an order concerning the application of 10,000 m² of interior plaster and 2,000 m² of exterior plaster in the middle of 2005, he knew that he would not get very far with only one PFT EM 11 M.

So he simply purchased a second PFT EM 11 M from his Paderborn-based construction machinery trader Moog Baumaschinen. Since his workers had already familiarised themselves with the use of this machine, the 12,000 m² plastering job was completed in an unbelievably short time of only six weeks. Roland Milosek and his customer had originally scheduled about eight to ten weeks for this project!

A quick and simple procedure: The cement-lime plaster is mixed in the mixing container and fed to the pump container, and the spray application can begin.

All Good Things Come in Threes

Today, Mr. Milosek even owns a third PFT EM 11 M. Thanks to the new PFT machines, which ensure a very effective and, above all, quick completion of building jobs, the plastering business Milosek has already secured a number of new orders. Roland Milosek also greatly appreciates the good cooperation between his firm, the PFT Headquarters in Iphofen and his partner trader Moog in Paderborn. In addition to his three PFT EM 11 M electric mixing pumps, he currently owns four PFT G 4 mixing pumps, two PFT SILOMAT systems and one PFT CUTMASTER hot-wire cutter. Mr. Milosek has become a highly satisfied PFT customer! ■
